Re: Proposed Department of Public Works Facility
48 Old Westboro Road
Special Permit, Site plan, and Stormwater Regulation Review Comments

Dear Joe and Maria:

Please see comments received along with our responses below:

Comments from Graves Engineering Review Letter received on July 19, 2018

1. *Ownership information of all abutting properties within 200 feet of the project property lines must be shown on the plans. The abutter information for 55 Old Westboro Road must be added to the plans. (§1.3.3.3.d.11).*

   Abutter information for 55 Old Westboro road has been added to the site plans. See existing conditions plan.

2. *The top of the impoundment berm for the infiltration basin and Rain Garden No. 1 was reasonably modeled as being at elevation 495.67 feet but the plans don't identify the proposed elevation of the top of the impoundment, and the proposed 494-foot and 495- foot topographic contours indicate that the top of the impoundment will be lower than elevation 495 feet. The proposed topography on the plans will need to be coordinated with the hydrology computations to provide sufficient freeboard above the 100-year water surface elevation. Likewise, for Rain Garden #2, the top of the impoundment was modeled as elevation 506.08 but Sheet C5.02 shows a spot elevation of 505.03 and what appear to be proposed 505 topographic contours close to each other on the south end of the rain garden (suggesting a narrow top-of-berm).*

   Rain Garden No.1 has been updated to be a Subsurface Gravel Wetland. In the HydroCAD model, the rain garden accounted for exfiltration that was routed to the primary outlet drain pipe, where the rain garden soil was hydraulically restrictive compared to the primary outlet drain pipe. For the Subsurface Gravel wetland design the primary outlet drain pipe will be the most restrictive component of the outlet system. To reflect this difference in the model, for the gravel wetland, the exfiltration routing was removed and adjustments were made to the outlet devices to keep the peak discharge below existing conditions. The changes made in the model are clouded on the attached HydroCAD Report sheets along with Hydrograph tables showing the new peak discharges from the site.

   Rain Garden No.2 has been renamed Bioretention Area No.1.

   The design topography has been updated on the Grading and Drainage Plan for both basins to provide 1-foot of freeboard above the peak water elevation of the 100-year storm, as required in the Stormwater Handbook. The peak water elevation for the Subsurface Gravel Wetland was calculated to be 494.77-feet and the top of the berm is shown to be at 495.77-feet. The peak water elevation for Bioretention area No.1 was calculated to be 504.85-feet and the top of the berm is shown to be at 505.85-feet.

3. *Labels need to be provided for the proposed topographic contours on the inside of the rain gardens' impoundment berms.*

   Contour labels have been added to the inside of the berms.

4. *The plans need to show the proposed tree line.*

   The proposed tree line has been added to the site plans.

5. *GEI performed a cursory review of the Traffic Study, with emphasis on sight distances. The Study appeared to be in order. The Study found adequate stopping sight distances and discussed minor clearing of underbrush and trees to improve intersection sight distances at the entrance/exit driveway. GEI concurs with the proposed tree pruning as noted on the upper section of Sheet C3.00 (clearing on both sides of the entrance/exit driveway and on the west side of the exit-only driveway), but the work should also include mowing of grasses and cutting of underbrush. The Study also found that the proposed facility will have a negligible effect on nearby traffic operations; we have no reason to dispute this finding.*

   Requirements for mowing grasses and cutting underbrush in areas required for sight distances have been added to sheet C3.00.

6. *If Grafton DPW wishes to accommodate "low bed" trailer deliveries to the facility, then trailer clearance should be evaluated where the exit-only driveway intersects Old Westboro Road; the change in grade may be too abrupt.*

   A ground conflict report was generated for a "low-boy trailer" using AutoCAD Civil 3D's vehicle tracking software. The grading plan has been revised to provide sufficient ground clearance for a low-boy trailer to enter in the southern entrance and drive around the DPW building and exit out the same southern entrance way as shown on the attached Grading and Drainage plan. It was confirmed with the DPW that one entrance and exit for a low bed trailer is sufficient for the DPW's operations.

Comments from Town Planners Memorandum received on July 19, 2018

1. *Tree Clearing: Proposed tree line, limit of clearing is not identified on the plans.*

   The proposed tree line was added to the site plans. See attached site plans.

2. *Light Details: Applicant should provide details and specification of lighting fixtures. Site Lighting Plan E-1.01 identified the fixtures, however the specifications were not provided, and the poles and mounting height were not identified.*

   Sight lighting specification sheets were provided in Appendix E of the original application. The mounting heights have been added to E-1.01. The updated E-1.01 SITE LIGHTING PLAN with product specification sheets are attached.

3. *Reuse of Stone walls: There are sections of stonewalls that will be disturbed during site activities, is there an opportunity to reuse some of the stone walls on the site?*

   We will specify that the General Contractor shall stock pile the stones, from the stone walls, on site. This will allow them to be available for use on other Town projects in the future. The stone wall stock pile area has been added to the Layout and Materials Plan C3.01.

4. *Signs: Plan includes typical directional signage. Plan should include details of these signs.*

   A traffic sign summary table was added to sheet D7.04, which provides details on the proposed signs.

5. *Visitor Parking: Plan should identify where visitor parking is located. Parking is beyond "Employees Only" sign meaning public may park in the recycling spaces.*

   The "Employee Only" sign referenced above has been relocated to clarify that access to the parking lot is open to the public. Additional visitor parking signs were added to clarify where visitors can park.

6. *Handicap for Visitors: Is parking for handicapped persons available to the general public?*

   Yes, we updated the traffic signs to clarify access to the handicap and visitor parking area.

7. *Rain Gardens 1 & 2: The rain gardens are designed as more traditional detention basins. Rain Gardens are typically thought of as low impact development tools where multiple vegetation types are used to mitigate pollutants and run-off.*

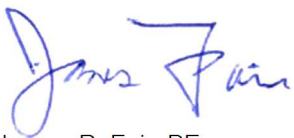
   Rain Garden 1 has been redesigned to be a Subsurface Gravel Wetland, as shown in the attached plans. Rain Garden 2 has been renamed as Bioretention Area No.1.

8. *Rain Garden 3: The landscape plan does not include a legend for the ground cover type. The operation and maintenance plan indicates the area may be mulched. Furthermore, the plan calls for two (2) river birch and four (4) yew shrubs. This design is not what I am familiar with for a rain garden. The EPA describes rain gardens as follows:*

   We have renamed Rain Garden 3 to Bioretention Area No.2 and have provided a label, in the Landscaping Plan, that indicates the N.E. Erosion Control Restoration Mix will be used in that area. This seed mix provides a diverse range of plants that can survive in drought conditions and in wet conditions which help to provide a better chance for naturalization, while also requiring minimal maintenance. We have removed the four Shrubs, but are keeping the two River Birches.

Sincerely,

WESTON & SAMPSON ENGINEERS, INC.



James R. Fair, PE
Team Leader / Project Manager

SustainabLEDesign™

Wal-Pak

Wall Mount Luminaire

COOPER Lighting

WP WAL-PAK WALL SERIES

WALL MOUNT LUMINAIRE

THE NEW STANDARD

The Wal-Pak Series of wall luminaires offers traditional architectural styling, rugged construction and superior performance. Coupled with available Light Emitting Diode [LED] technology, full cutoff removable door, standard IP65 Ingress Protection and emergency egress options, Wal-Pak is an exceptionally flexible platform that offers undisputed appeal for wall mount applications.

ENERGY SAVINGS

Conservation of energy, expertise in design and rigourous reliability testing ensure superior luminaire performance. With advancements in LED technology combined with Cooper Lighting's expertise in fixture and optical design, the Wal-Pak Series demonstrates that new technology saves energy without compromising performance.

FULL CUTOFF DOOR
[FC]

FLAT SOLITE® GLASS DOOR
[FL]

BOROSILICATE GLASS/
POLYCARBONATE REFRACTOR DOOR
[GL/PL]

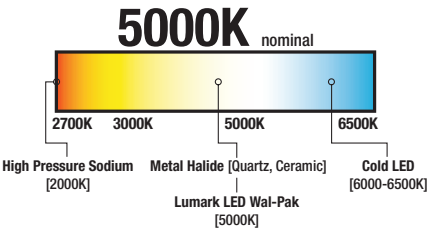
ABUNDANT SELECTION

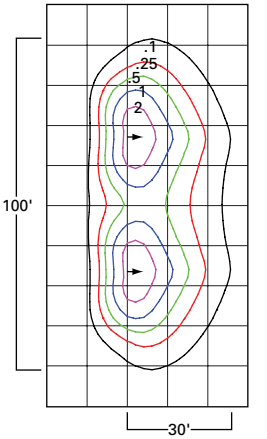
The Wal-Pak Series provides a choice of three [3] hinged, removable doors including IESNA full cutoff, Solite™ flat glass lens and refractive, tempered borosilicate glass along with six [6] unique lamp sources inclding energy efficient LED, pulse start metal halide, compact fluorescent, ceramic metal halide, standard metal halide and high pressure sodium.

LED SPECIFICATION FEATURES

UNIFORM ILLUMINATION

Wal-Pak's patent pending LED light engine is optimized for energy efficient performance. With effective thermal management, precise positioning of the LED package assembly and a highly reflective anodized aluminum reflector; Wal-Pak LED provides glare free, uniform illumination while providing a safe and comfortable visual experience.





LED TECHNOLOGY

Light emitting diodes are solid state devices that offer uniform illumination, reliable long life, eco-friendly low maintenance, and superior energy savings. Over 70% of the initial light output is maintained after 50,000 hours of operation. In application, an LED fixture can last up to six [6] times longer than metal halide lamped sources.

SUPERIOR ILLUMINATION

Wal-Pak LED luminaires produce up to 4000 initial lumens. Brilliant white 5000K color temperature LED's provide uniform white light similar to traditional metal halide light sources. Combining excellent color rendering with superior thermal management, optimized reflector technology and premium glare-free Solite™ glass make the Wal-Pak LED luminaire a superior performer.

LED WAL-PAK FULL CUTOFF 4A MODEL TYPICAL APPLICATION:

- 100' Illumination Distribution Pattern [2 fixtures]
- 30' Forward Throw
- 75% Street Side Illumination
- IESNA Full Cutoff Compliant
- Replaces up to 175W Metal Halide

REDUCED ENERGY CONSUMPTION

Operating and maintenance costs of a lighting system are dramatically impacted by the specified lamp source and electrical system. Total system input watts and fixture operating life should be the driving considerations when addressing energy consumption and total cost of ownership. Energy savings increase when energy consumption is reduced and maintenance intervals are extended.

ANNUALIZED ENERGY SAVINGS/COST COMPARISON

FIXTURE	HOURS/ YEAR	LIFE [hrs.]	TOTAL INPUT WATTS	COST/YEAR @ $ .10 KWH	RELAMP/FIXTURE	TOTAL ANNUALIZED COST/FIXTURE	SAVINGS PER FIXTURE	OVERALL % SAVINGS
LED Wal-Pak [2400 Lumens]	11/4015	50,000	22	$8.83	$0	$8.83	$92.96	**91%**
100W MP Wall Pack		12,000	128	$51.79	$50	$101.79		
LED Wal-Pak [4000 Lumens]	11/4015	50,000	40	$16.06	$0	$16.06	$138.26	**90%**
175W MH Wall Pack		12,000	210	$84.32	$70	$154.32		

NOTES: Cost = (Watts x 11 Hours Per Day x 365 Days per Year) /1000 = Daily Kilowatt hour (kWh). kWh x $.10 cents/kWh = Cost/year at $.10 cents/kWh. Relamp is once per every 2.5 years, $125/100W and $175/175W averaged over 2.5 years.

HID/LED CROSS REFERENCE CHART

HID SYSTEMS	HID WATTAGE	RATED AVG. LIFE [hrs.]	WAL-PAK LED SYSTEM LUMEN PACKAGE [1]	LED WATTAGE [2]	LED LIFE [hrs.]	ENERGY SAVINGS
50W Pulse Start Metal Halide	72	12,000	2A	22	50,000	**69%**
70W Pulse Start Metal Halide	90	12,000	2A	22	50,000	**76%**

150W High Pressure Sodium	188	24,000	4A	40	50,000	**79%**

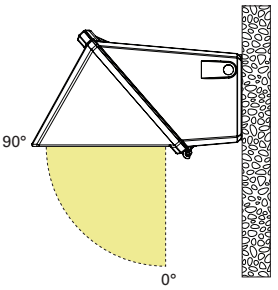
NOTES: **1** Nominal lumens prior to optical and configuration losses based on 67 CRI. 5000K package at 25ºC ambient. 2A=2400 [Lumens], 4A=4000 [Lumens]. **2** LED Wattage varies by Wal-Pak configuration. Hours of life based on 70% lumen maintenance.

DARK SKY FRIENDLY + OPTIONS + ACCESSORIES

DARK SKY FRIENDLY ILLUMINATION

The Wal-Pak Series with full cutoff door meets The Illuminating Engineering Society of North American [IESNA] classification for full cutoff illumination [zero light at or above the 90° plane]. Full cutoff luminaires minimize light trespass and light pollution.

DARK SKY COMPLIANT FCO Full Cutoff



BACK-UP POWER OPTIONS

Wal-Pak solves the requirement for providing back-up power illumination along the path of egress during critical power outage situations. Select from LED or compact fluorescent integral NiCad battery packs, quartz restrike, low or line voltage DC remote or separate circuit emergency back-up options.

SINGLE OR DUAL LAMP COMPACT FLUORESCENT EMERGENCY BATTERY PACK OPTIONS

[CF-EM, EMI40, CF-EM-2L, EMI40-2L]

Integral UL924 emergency lighting NiCad battery pack provides emergency lighting illumination for single or dual lamp compact fluorescent light sources. The CF-EM battery pack is designed for 0°C/32°F illumination for up to 70W. The EMI40 provides up to 70W of cold temperature -18°C/-4°F emergency back-up illumination. For two [2] 32W lamp operation use CF-EM-2L or EMI40-2L.

LED BATTERY PACK OPTIONS [EM-LED, EM-LED-CD]

Integral NiCad battery pack provides battery back-up illumination for 4A models. The LED-EM battery pack is designed for 0°C/32°F applications. EM-LED-CD is designed for -18°C/-4°F cold temperature applications.

EMERGENCY LOW VOLTAGE 12V DC REMOTE OPTIONS [EM/SC/12V, 2EM/SC/12V]

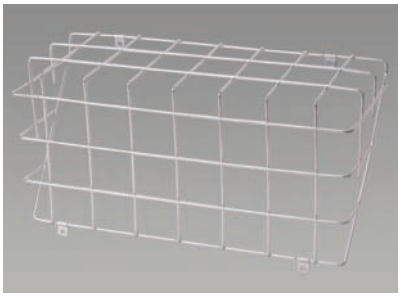
Single or dual lamp low voltage 12V DC bi-pin remote lamp provides fixture illumination in the emergency mode. The 12V DC lamps are energized from a remote DC battery source [provided by others].

SEPARATE CIRCUIT QUARTZ RESTRIKE AND EMERGENCY QUARTZ RESTRIKE OPTION [2QMR/SC]

MR16 halogen lamp source illuminates upon the reactivation of the HID lamp. The secondary source provides separate circuit emergency illumination upon loss of utility power.

QUARTZ RESTRIKE OPTIONS [Q, QMR, 2QMR, EM, EM/SC]

T4 quartz restrike [120V] and sngle or dual MR16 halogen lamps allow adequate time for main HID lamp to reignite to full brilliance. EM option allows for cold start of HID lamps as it includes a time delay relay. The EM/SC emergency separate circuit option allows for the quartz lamps to be wired to an independent emergency back-up power source.



WIRE GUARD [WG/ITM]

Galvanized coated steel wire guard option prevents lens damage due to projected elements.

SPECIFICATION FEATURES

CONSTRUCTION AND RATINGS

Rugged one-piece die-cast aluminum housing and hinged, removable die-cast aluminum door. One-piece silicone gasket seals the optical chamber against performance degrading contaminates. UL 1598 wet location listed and IP65 ingress protection provides complete defense against dust entry while virtually eliminating moisture. Single point, captive stainless steel hardware secures the removable hinged door allowing for ease of installation and maintenance.

OPTICAL

Custom engineered highly reflective anodized aluminum reflectors provide high efficiency illumination. Impact resistant tempered borosilicate refractive glass provides maximum photometric performance and beam efficiency. Solite™ flat diamond patterned glass ensures smooth illumination coupled with a clean aesthetic appearance. Patent pending solid state LED luminaires are thermally optimized with 2400 or 4000 lumen package modules. Tradition light source optical assemblies are offered standard with horizontal medium or mogul-based metal halide [MH / MP] or high pressure sodium [HP] lamps. High efficiency T6 ceramic metal halide [CM] offers excellent color rendering and energy efficient 4-pin compact fluorescent [CF] lamps provide excellent lumen maintenance.

ELECTRICAL

Ballasts, LED driver and related electrical components are safely secured and hard mounted to the die-cast housing for optimal heat sinking and operating efficiency. All wiring is extended through a silicone gasket at the back of the housing to prevent entry of debris, moisture, dust and insects. Three 1/2" threaded conduit entry points allow for thru-branch wiring. Patent pending Wal-Pak LED thermal management system incorporates both conductive and natural convection to transfer heat rapidly away from the LED source. Integral LED electronic driver incorporates internal fusing designed to withstand a 3kV line surge and is Class 2 rated for 120-277V with an operating temperature of -30°C to 60°C. Wal-Pak LED systems maintain greater than 70% of the initial light output after 50,000 hours of operation. UL listed HID high power factor ballasts are Class H insulation rated [metal halide: 150, 175, 200, 250, 320, 350, 400W [-30ºC /-20ºF], high pressure sodium: 50, 70, 100, 150, 250, 400W [-40ºC/-40ºF]. High efficiency HID ballasts are available in a multitude of voltage configurations including 120, 208, 240, 277, 347 and 480V. Compact fluorescent high power factor ballasts are Class P insulation rated for 120-277V and have a starting temperature of -18ºC/0ºF.

SHIPPING DATA

Approximate Net Weight: 32-42 [15-19 kgs.]

NOTES: 1 CF Single lamp offered in all door configurations. CF dual lamp models not offered with FL door type. 70W models not available with EMI40-2L, CF-EM, CF-EM-2L. CF not available in 347V. **2** All CM models offered with T6 envelope G12 lamp base. T6 Lamp included with CM models. Order LL with CM models. Ceramic Metal Halide (CM) is available with (MP) pulse start metal halide or E - Electronic Ballast. **3** MH products available for non-US markets only. **4** Small housing offered for 175W and below, CF and LD models. Large housing for 200W-400W. FL door not available with CF or 200-400W models. Polycarbonate lens available in models up to 175W max including LD. Polycarbonate lens not available with full cutoff door or FL models. Solite stipple glass is standard for FL lens. Clear glass is standard for full cutoff door types except for LD. LD full cutoff door is standard with solite glass. **5** LD nominal initial lumens prior to optical and configuration losses based on 67 CRI/5000K package at 25°C ambient. MH and MP 175W and below are medium base all others are mogul base. CF 64, 84, 114 and 140 models are offered in borosilicate glass and full cutoff doors only. In cold temperatures, compact fluorescent lamps produce lower illumination levels. **6** See Voltage Chart for descriptions. 5T available in 400W MH models only. 90°C Rated wire required for thru-branch wiring for units 175W and lower. 105°C Rated wire required for thru-branch wiring for units 200W and higher. Thru-branch wiring is rated for 40°C for LD and 175W and below. Higher wattage thru-branch wiring is rated for use in 25°C ambient operating environments. **7** 347V not available with thru-branch wiring. For 347 or 480V LD specify voltage. ED will be supplied with integral step down transformer. 347V not available with CF lamps. **8** Available with 70-150W MP or CM lamps. E is standard for all CF models. All electronic ballasts are universal 120-277V. **9** Not all options can be combined. Only one emergency or battery back-up option available within the fixture. **10** Specify voltage. F1 - 120, 277 or 347V, F2 - 208 or 240V, PE - 120, 208, 240, 277V. Q, EM, EM/SC available in 120V only. **11** DIMA dimming ballast, specify number of lamps, available for 1 or 2-26W or 1-32W, 1-42W. DIMB available for 2-42W, 1-57W or 1-70W. **12** SGL optional on HID and CF models only. See note 4. **13** Max 100W, T4 Quartz lamp. Lamp supplied by others. **14** Not available with LD. Lamps supplied by others. **15** 1 or 2 GU10 base 50 watt max - 120V Halogen lamps supplied by others. **16** Emergency lamp leads out of the back of the unit to auxiliary power. Lamps independently wired to separate circuits. **17** Low Voltage 1 or 2 GU5.3 MR16 base, 12V DC, 35W max. Lamp supplied by others. **18** For use in 25°C ambient operating temperature environments. EMI40, EMI40/2L used for CF lamps. Specify 120 or 277V. EMI40 supports 1-70W CF max, EMI40/2L supports 2-32W CF max. Minimum -18°C/-4°F. **19** For use in 25°C ambient operating temperature environments. Specify 120 or 277V, CF-EM supports up to 1-57W CF. CF-EM/2L supports 2-18W CF, 18W lamps supplied by others. Minimum temperature is 0°F/32°C. **20** EM-LED and EMLED-CD available with 4A models only. For use in 25°C ambient operating temperature environments. Specify 120 or 277V EM-LED minimum 0°C/32°F, EMLED-CD minimum -20°C/-4°F. Battery pack is a UL recognized component. **21** Specifications and dimensions subject to change without notice.

McGraw-Edison

DESCRIPTION

The Galleon™ LED luminaire delivers exceptional performance in a highly scalable, low-profile design. Patented, high-efficiency AccuLED Optics™ system provides uniform and energy conscious illumination to walkways, parking lots, roadways, building areas and security lighting applications. IP66 rated and UL/cUL Listed for wet locations.

SPECIFICATION FEATURES

Construction
Extruded aluminum driver enclosure thermally isolated from Light Squares for optimal thermal performance. Heavy-wall, die-cast aluminum end caps enclose housing and die-cast aluminum heat sinks. A unique, patent pending interlocking housing and heat sink provides scalability with superior structural rigidity. 3G vibration tested and rated. Optional tool-less hardware available for ease of entry into electrical chamber. Housing is IP66 rated.

Optics
Patented, high-efficiency injection-molded AccuLED Optics technology. Optics are precisely designed to shape the distribution maximizing efficiency and application spacing. AccuLED Optics create consistent distributions with the scalability to meet customized application requirements. Offered standard in 4000K (+/- 275K) CCT 70 CRI. Optional 3000K, 5000K and 6000K CCT.

Electrical
LED drivers are mounted to removable tray assembly for ease of maintenance. 120-277V 50/60Hz, 347V 60Hz or 480V 60Hz operation. 480V is compatible for use with 480V Wye systems only. Standard with 0-10V dimming. Shipped standard with Eaton proprietary circuit module designed to withstand 10kV of transient line surge. The Galleon LED luminaire is suitable for operation in -40°C to 40°C ambient environments. For applications with ambient temperatures exceeding 40°C, specify the HA (High Ambient) option. Light Squares are IP66 rated. Greater than 90% lumen maintenance expected at 60,000 hours. Available in standard 1A drive current and optional 600mA, 800mA and 1200mA drive currents (nominal).

Mounting
STANDARD ARM MOUNT: Extruded aluminum arm includes internal bolt guides allowing for easy positioning of fixture during mounting. When mounting two or more luminaires at 90° and 120° apart, the EA extended arm may be required. Refer to the arm mounting requirement table. Round pole adapter included. For wall mounting, specify wall mount bracket option. QUICK MOUNT ARM: Adapter is bolted directly to the pole. Quick mount arm slide into place on the adapter and is secured via two screws, facilitating quick and easy installation. The versatile, patent pending, quick mount arm accommodates multiple drill patterns ranging from 1-1/2" to 4-7/8". Removal of the door on the quick mount arm enables wiring of the fixture without having to access the driver compartment. A knock-out enables round pole mounting.

Finish
Housing finished in super durable TGIC polyester powder coat paint, 2.5 mil nominal thickness for superior protection against fade and wear. Heat sink is powder coated black. Standard housing colors include black, bronze, grey, white, dark platinum and graphite metallic. RAL and custom color matches available.

Warranty
Five-year warranty.

CONTROL OPTIONS

0-10V (DIM)
This fixture is offered standard with 0-10V dimming driver(s). The DIM option provides 0-10V dimming wire leads for use with a lighting control panel or other control method.

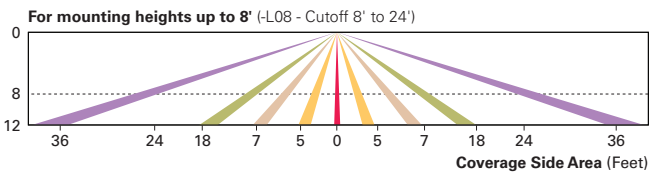
Photocontrol (P, R and PER7)
Optional button-type photocontrol (P) and photocontrol receptacles (R and PER7) provide a flexible solution to enable "dusk-to-dawn" lighting by sensing light levels. Advanced control systems compatible with NEMA 7-pin standards can be utilized with the PER7 receptacle.

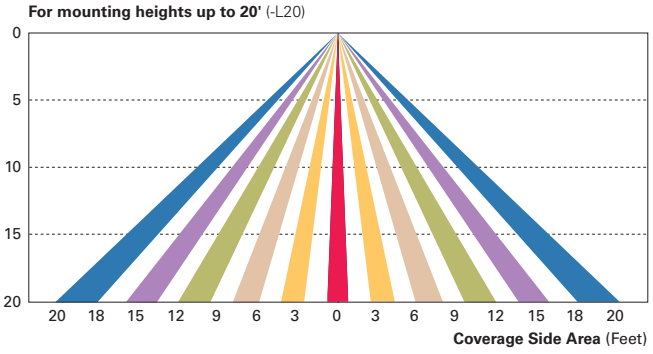
After Hours Dim (AHD)
This feature allows photocontrol-enabled luminaires to achieve additional energy savings by dimming during scheduled portions of the night. The dimming profile will automatically take effect after a "dusk-to-dawn" period has been calculated from the photocontrol input. Specify the desired dimming profile for a simple, factory-shipped dimming solution requiring no external control wiring. Reference the After Hours Dim supplemental guide for additional information.

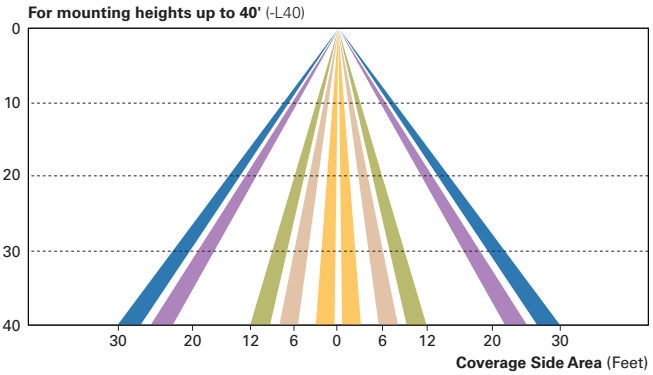
Dimming Occupancy Sensor (MS/DIM-LXX, MS/X-LXX and MS-LXX)
These sensors are factory installed in the luminaire housing. When the MS/DIM-LXX sensor option is selected, the occupancy sensor is connected to a dimming driver and the entire luminaire dims when there is no activity detected. When activity is detected, the luminaire returns to full light output. The MS/DIM sensor is factory preset to dim down to approximately 50 percent power with a time delay of five minutes. The MS-LXX sensor is factory preset to turn the luminaire off after five minutes of no activity. The MS/X-LXX is also preset for five minutes and only controls the specified number of light engines to maintain steady output from the remaining light engines.

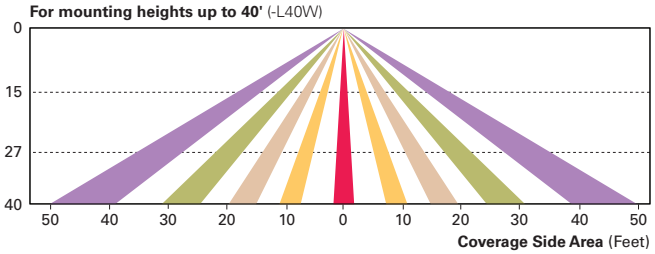
These occupancy sensors includes an integral photocell that can be activated with the FSIR-100 accessory for "dusk-to-dawn" control or daylight harvesting - the factory preset is OFF. The FSIR-100 is a wireless tool utilized for changing the dimming level, time delay, sensitivity and other parameters.

A variety of sensor lens are available to optimize the coverage pattern for mounting heights from 8'-40'.









LumaWatt Wireless Control and Monitoring System (LWR-LW and LWR-LN)
The LumaWatt system is a peer-to-peer wireless network of luminaire-integral sensors for any sized project. Each sensor is capable of motion and photo sensing, metering power consumption and wireless communication. The end-user can securely create and manage sensor profiles with browser-based management software. The software will automatically broadcast to the sensors via wireless gateways for zone-based and individual luminaire control. The LumaWatt software provides smart building solutions by utilizing the sensor to provide easy-to-use dashboard and analytic capabilities such as improved energy savings, traffic flow analysis, building management software integration and more.

For additional details, refer to the LumaWatt product guides.

HA=50°C High Ambient [19]
MS/DIM-L08=Motion Sensor for Dimming Operation, Maximum 8' Mounting Height [20, 21]
MS/DIM-L20=Motion Sensor for Dimming Operation, 9' - 20' Mounting Height [20, 22]
MS/DIM-L40=Motion Sensor for Dimming Operation, 21' - 40' Mounting Height [20, 23]
MS/DIM-L40W=Motion Sensor for Dimming Operation, 21' - 40' Mounting Height (Wide Range) [20, 24]
MS/X-L08=Bi-Level Motion Sensor, Maximum 8' Mounting Height [20, 21, 25]
MS/X-L20=Bi-Level Motion Sensor, 9' - 20' Mounting Height [20, 22, 25]
MS/X-L40=Bi-Level Motion Sensor, 21' - 40' Mounting Height [20, 23, 25]
MS/X-L40W=Bi-Level Motion Sensor, 21' - 40' Mounting Height (Wide Range) [20, 24, 25]
MS-L08=Motion Sensor for ON/OFF Operation, Maximum 8' Mounting Height [20, 21]
MS-L20=Motion Sensor for ON/OFF Operation, 9' - 20' Mounting Height [20, 22]
MS-L40=Motion Sensor for ON/OFF Operation, 21' - 40' Mounting Height [20, 23]
MS-L40W=Motion Sensor for ON/OFF Operation, 21' - 40' Mounting Height (Wide Range) [20, 24]
LWR-LW=LumaWatt Wireless Sensor, Wide Lens for 8' - 16' Mounting Height [26]
LWR-LN=LumaWatt Wireless Sensor, Narrow Lens for 16' - 40' Mounting Height [26]
L90=Optics Rotated 90° Left
R90=Optics Rotated 90° Right
MT=Factory Installed Mesh Top
TH=Tool-less Door Hardware
LCF=Light Square Trim Plate Painted to Match Housing [27]
HSS=Factory Installed House Side Shield [28]
CE=CE Marking [29]

Accessories (Order Separately)

OA/RA1016=NEMA Photocontrol Multi-Tap - 105-285V
OA/RA1027=NEMA Photocontrol - 480V
OA/RA1201=NEMA Photocontrol - 347V
OA/RA1013=Photocontrol Shorting Cap
OA/RA1014=120V Photocontrol
MA1252=10kV Surge Module Replacement
MA1036-XX=Single Tenon Adapter for 2-3/8" O.D. Tenon
MA1037-XX=2@180° Tenon Adapter for 2-3/8" O.D. Tenon
MA1197-XX=3@120° Tenon Adapter for 2-3/8" O.D. Tenon
MA1188-XX=4@90° Tenon Adapter for 2-3/8" O.D. Tenon
MA1189-XX=2@90° Tenon Adapter for 2-3/8" O.D. Tenon
MA1190-XX=3@90° Tenon Adapter for 2-3/8" O.D. Tenon
MA1191-XX=2@120° Tenon Adapter for 2-3/8" O.D. Tenon
MA1038-XX=Single Tenon Adapter for 3-1/2" O.D. Tenon
MA1039-XX=2@180° Tenon Adapter for 3-1/2" O.D. Tenon
MA1192-XX=3@120° Tenon Adapter for 3-1/2" O.D. Tenon
MA1193-XX=4@90° Tenon Adapter for 3-1/2" O.D. Tenon
MA1194-XX=2@90° Tenon Adapter for 3-1/2" O.D. Tenon
MA1195-XX=3@90° Tenon Adapter for 3-1/2" O.D. Tenon
FSIR-100=Wireless Configuration Tool for Occupancy Sensor [20]
GLEON-MT1=Field Installed Mesh Top for 1-4 Light Squares
GLEON-MT2=Field Installed Mesh Top for 5-6 Light Squares
GLEON-MT3=Field Installed Mesh Top for 7-8 Light Squares
GLEON-MT4=Field Installed Mesh Top for 9-10 Light Squares
GLEON-QM=Quick Mount Arm Kit
GLEON-QMEA=Quick Mount Extended Arm Kit
LS/HSS=Field Installed House Side Shield [28, 30]

NOTES:
1. Customer is responsible for engineering analysis to confirm pole and fixture compatibility for all applications. Refer to our white paper WP513001EN for additional support information.
2. DesignLights Consortium™ Qualified. Refer to www.designlights.org Qualified Products List under Family Models for details.
3. Standard 4000K CCT and minimum 70 CRI.
4. Not compatible with extended quick mount arm (QMEA).
5. Not compatible with standard quick mount arm (QM) or extended quick mount arm (QMEA).
6. Requires the use of an internal step down transformer when combined with sensor options. Not available with sensor at 1200mA. Not available in combination with the HA high ambient and sensor options at 1A.
7. Only for use with 480V Wye systems. Per NEC, not for use with ungrounded systems, impedance grounded systems or corner grounded systems (commonly known as Three Phase Three Wire Delta, Three Phase High Leg Delta and Three Phase Corner Grounded Delta systems).
8. May be required when two or more luminaires are oriented on a 90° or 120° drilling pattern. Refer to arm mounting requirement table.
9. Factory installed.
10. Maximum 8 light squares.
11. Maximum 6 light squares.
12. Extended lead times apply. Use dedicated IES files for 3000K, 5000K and 6000K when performing layouts. These files are published on the Galleon luminaire product page on the website.
13. Extended lead times apply. Use dedicated IES files for 3000K, 5000K and 6000K when performing layouts. These files are published on the Galleon luminaire product page on the website.
14. 1 Amp standard. Use dedicated IES files for 600mA, 800mA and 1200mA when performing layouts. These files are published on the Galleon luminaire product page on the website.
15. Not available with HA option.
16. 2L is not available with MS, MS/X or MS/DIM at 347V or 480V. 2L in AF-02 through AF-04 requires a larger housing, normally used for AF-05 or AF-06. Extended arm option may be required when mounting two or more fixtures per pole at 90° or 120°. Refer to arm mounting requirement table.
17. Not available with LumaWatt wireless sensors.
18. Requires the use of P photocontrol or the PER7 or R photocontrol receptacle with photocontrol accessory. See After Hours Dim supplemental guide for additional information.
19. 50°C lumen maintenance data applies to 600mA, 800mA and 1A drive currents.
20. The FSIR-100 configuration tool is required to adjust parameters including high and low modes, sensitivity, time delay, cutoff and more. Consult your lighting representative at Eaton for more information.
21. Approximately 22' detection diameter at 8' mounting height.
22. Approximately 40' detection diameter at 20' mounting height.
23. Approximately 60' detection diameter at 40' mounting height.
24. Approximately 100' detection diameter at 40' mounting height.
25. Replace X with number of Light Squares operating in low output mode.
26. LumaWatt wireless sensors are factory installed only requiring network components RF-EM-1, RF-GW-1 and RF-ROUT-1 in appropriate quantities. See www.eaton.com/lighting for LumaWatt application information.
27. Not available with house side shield (HSS).
28. Only for use with SL2, SL3, SL4 and AFL distributions. The Light Square trim plate is painted black when the HSS option is selected.
29. CE is not available with the LWR, MS, MS/X, MS/DIM, P, R or PER7 options. Available in 120-277V only.
30. One required for each Light Square.
